## FLY KILLER BAIT

Ready to use granular insecticide kills flies on contact and ingestion

For use in Animal & Livestock Housing

Fast and effective control containing specialist luring Z9 pheromones and attractants

Easy to apply to hanging boards and containers

Treats up to a 1000m<sup>2</sup>

0.9% AZAMETHIPHOS GRANULE ORGANOPHOSPHATE  
INSECTICIDE with pheromones & attractants  
FOR PROFESSIONAL USE

ARMOSA

## SHEILA RB1 - Granular Fly Bait Insecticide to control flies in livestock buildings. Azamethiphos 0.9%

### STATUTORY CONDITIONS RELATING TO USE

For use only as an insecticide by professional operators. SHEILA should be applied to areas of fly activity and placed out of the reach of animals. SHEILA is made from a secret formulation of attractants and 29 pheromones which makes it an ideal product for monitoring fly activity as well as achieving outstanding knockdown results. Flies are literally lured to the product on which they feed resulting in instant death. SHEILA should be applied as soon as flies are seen. SHEILA should be sprinkled into suitable containers and placed where there is fly activity. Alternatively the granules can be applied directly onto the SHEILA and TWENTY-ONE boards, or alternatively boards with a suitable surface. Lay the board down on a flat surface. Evenly spread the granules generously but in thin layers to cover the board. After the granules have been applied to the surface lightly spray them with a very fine mist of water or cola. This will ensure that the granules stick to the board and also increases the efficacy of the poison. The board should then be left to dry before hanging. Fly bait is the preferred method of fly control of a perimeter of common housefly. 200g/100m<sup>2</sup> surface area to be spread in different places. To be applied in locations inaccessible to children and animals. Repeat after 2 to 3 weeks if necessary. NB. Replace the bait if it is covered in dead flies or dirt. Not effective against horseflies. Destroy the packaging and dispose of it in accordance with local regulations. The packaging should not in any circumstances be re-used for other purposes. Do not allow the product or empty packaging to contaminate ponds, watercourses or ditches. In order to avoid having product left over after application, endeavour to calculate as accurately as possible the amount to apply, based on the area to be treated. Users must comply in full with all their legal responsibilities under the Control of Pesticides Regulations 1986 (as amended), including complying with all Conditions of Approval.

**WARNING**

H410 - Very toxic to aquatic life with long lasting effects.  
P273 - Avoid release to the environment.  
P391 - Collect spillage.  
P501 - Dispose of contents and container to hazardous or special waste collection point, in accordance with local, regional, national and/or international regulation.

**Active substance:** Azamethiphos  
**READ ALL PRECAUTIONS BEFORE USE**
