

Pest Problems Poultry Solutions

Complete product guide for
protecting Poultry & Farms from pests

Rodent Solutions

Rodents are a serious issue on poultry farms, where abundant food, water, and shelter make them common invaders. Rodents not only spread dangerous diseases like Salmonella and Avian Flu but also contaminate far more feed than they consume. They gnaw on electrical wiring, posing fire hazards, and even prey on eggs and young chicks.

Lodi UK offers the perfect all-in-one solution to tackle these rodent problems. Our **Gems range** features three powerful anticoagulant actives: **Brodifacoum**, a single-feed bait and multi-feed baits Bromadiolone and Difenacoum - available in grain, paste, and block formulations to suit any farms needs. For those worried about secondary poisoning, **Lodi Harmonix** uses the innovative Cholecalciferol, controlling rodents in half the time with reduce risk.

For fast-acting mouse control, **Black Pearl** delivers results in under 24 hours. If you have a rodent problem, Lodi UK has the solution.

- Rodents spread diseases like Salmonella and Avian Flu
- Mice are incontinent - a colony contaminates far more feed than it eats
- Rodents gnaw wiring, causing fires and damage
- Large rats eat eggs and young chicks
- Rodent infestations are more common than you think

Red Mite Solutions

Red Mites are a persistent threat to poultry, causing anaemia, skin irritation, weight loss, and reduced egg production. These nocturnal pests hide in cracks, feed on birds at night, and spread diseases like Salmonella and Avian Flu. With their rapid reproduction and ability to survive up to 8 months between feeds, red mites can be tough to eradicate.

Lodi UK offers a comprehensive range of Red Mite solutions to tackle infestations at every level. Lodi's **Natural Hygiene Powder** (diatomaceous earth) can be applied directly to birds for a healthy body, while **Organ-X Red Mite Spray** delivers a 100% mortality rate within 30 minutes of contact. For Mites hiding in cracks, **Organ-X Pyrethrum Powder** can be puffed into crevices, and the **Organ-X Red Mite Smoke Bomb** effectively eliminates mites in empty housing, reaching all nooks and crannies.

Lodi UK's Red Mite range is tailored to keep your poultry healthy and productive.

- Red Mites cause anaemia and reduce egg production
- Spread diseases like Salmonella and Avian Flu
- Infestations grow rapidly, surviving up to 8 months

Fly Solutions

Flies can be a serious issue for poultry farmers, causing stress to birds, reducing productivity, and spreading diseases like bacteria, viruses, and parasites. The presence of flies in poultry housing can lead to economic losses from decreased egg production and increased cleaning costs. Flies thrive in housing due to the warm, organic environment, and their rapid life cycle allows infestations to escalate quickly.

Lodi's comprehensive fly control products include **Organ-X Pro-Formula Fly Trap XL** - a non-toxic monitoring tool to capture and track fly populations around poultry housing, **Maggots** and **Larvenol** Larvicides which target fly larvae by preventing them from developing into adult flies, **Perbio Choc RTU** - the UK's strongest RTU spray that provides up to 3 months of residual fly control, effective for both flies and Red Mite, **Twenty One** and **Sheila** Fly Baits are fast-acting baits that lure and kill flies upon contact.

By using these products together, poultry farmers can effectively manage fly infestations and protect their livestock and operations.

- A female house fly can lay up to 500 eggs
- Sheila and Twenty One are the only fly baits to kill both on ingestion and contact
- Poultry housing offers 5* accommodation for flies
