### SAPPHIRE GRAIN 25

150g POUCH CONTAINS 6 x 25g GRAIN SACHETS

**SAPPHIRE GRAIN 25** contains the single feed active ingredient **Brodifacoum** on an oat grain which can control mice and rats in 1 feed.

Sapphire grain is packed in 25g sachets to keep the bait as fresh as possible. The bait is produced using the freshest and highest quality ingredients to ensure rodents are lured to the baits quickly and infestations controlled fast. The strength of Sapphire Grain 25 offers the user a great solution to control large infestations of rats quickly when other baits might not work.

#### Successful treatment of Rats with Sapphire Grain 25

1. Check for signs of activity in and around buildings. This can be burrows or runs. Rats are very cautious and will run beside buildings and look to hide in any cover that might offer them a form of safety.
2. Place tamperproof bait stations every 5-10 metres apart where there are signs of rodent activity and in areas where rodents would feel safe and not exposed
3. Place 2 x 25g of SAPPHIRE GRAIN into each bait station
4. Check the bait 5-7 days after the first treatment and replenish any bait taken
5. Search for, remove and dispose of any dead rodents found.

#### NOTE:

- Each 150g pouch contains 6 x 25g grain sachets enough for 3 rat bait points.
- Medium to high infestations require a number of bait points. Bait refills may be required to replenish any bait taken. Once bait-take has stopped, the infestation has been controlled, so bait must be withdrawn from the bait stations and disposed of correctly. Always read the label.

#### Successful treatment of Mice with Sapphire Grain 25

Place 1 x 25g grain bait sachet into a tamperproof bait station and place where there are signs of mouse activity.

Place multiple bait stations every 2-5 metres if required.

Please always refer to and follow product label information detailed on pouches inside this box before use.

Pest Control Products

Authorisation No: GB-2016-1056-0003, NI-2016-1056-0003, E.EPA-73277-001  
 Use category: For general public use  
 Field of use: Indoor use for mice and rats (1) outdoor around buildings for rats only  
 Application method: Ready-to-use bait to be used in tamper-resistant bait stations.  
 Tamper-resistant bait stations: Strong enough to prevent entry or destruction by mice. Strong enough to prevent entry or destruction by children under six years of age using blades, feet or objects readily available to the public. If the use area is a school, nursery, residential depot, day care facility, accessible to the public and dogs cannot gain access through the opening or openings used to fill the bait compartments, resistant to destruction or tampering from exposure to typical non-chemical weathering agents (e.g. direct sunlight, extremes of temperature and humidity, salt, snow etc.) use for mice and rats (1) outdoor around buildings for rats only.  
 Target organisms: Rattus norvegicus (brown rat), Rattus rattus (roof rat), Mus musculus (house mouse).

Application rates and frequency:  
 For mice: 45 - 60 g of bait per bait station. If more than one bait station is needed, the minimum distance between bait stations should be 5 - 10 m apart.  
 For rats: 10 - 20 g of bait per bait station. If more than 1 bait station is needed, the minimum distance between bait stations should be 2 - 5 m apart.

Instructions for use: Read and follow the product information as well as any information accompanying the product or provided at the point of sale before using it. Prior to the use of rodenticide products, non-chemical control methods (e.g. traps) should be considered. Dispose of bait which is readily available to rodents (e.g. spilled grain or food waste). Apart from this, do not clean up the infested area just before the treatment, as this only disturbs the rodent population and makes bait acceptance more difficult to achieve. Bait stations should be placed in the immediate vicinity where rodent activity has been observed (e.g. travel paths, feeding sites, droppings, wheel burrows etc.). Where possible, bait stations must be fixed to the ground or other structures. Do not open the sachets containing the bait. Place bait stations out of the reach of children, animals, domestic pets and other non-target animals. Place bait stations away from food, drink and animal feeding stuffs, as well as from drains or surfaces that have contact with these. Do not touch bait stations, hot water or drainage systems where you can come into contact with water. When using the product do not eat, drink or smoke. Wash hands and directly exposed skin after using the product. Remove the remaining bait or the bait stations at the end of the treatment period.

Use specific instructions for use:  
 Mice: The bait stations should be visited at least every 2 to 3 days at the beginning of the treatment and at least weekly afterwards, in order to check whether the bait is accepted, the bait stations are filled and to remove rodent bodies. Re-fill bait when necessary.  
 Rats: The bait stations should be visited only 5 to 7 days after the beginning of the treatment and at least weekly afterwards, in order to check whether the bait is accepted, the bait stations are filled and to remove rodent bodies. Re-fill bait when necessary.  
 Place the bait stations in areas most likely to be feeding. Replace any bait in a bait station which has been damaged by water or contaminated by dirt.

Risk mitigation measures:  
 Consider preventive control measures (plug holes, remove potential food and drinking as far as possible) to improve product intake and reduce the likelihood of reinfestation. Do not use anticoagulant rodenticides as preventive baits to prevent rodent infestation or to detect rodent activity. Using this product should eliminate rodents within 35 days. The product information (e.g. label and/or label) should clearly recommend that in case of suspected lack of efficacy by the end of the treatment (i.e. rodent activity is still observed), the user should seek advice from the product supplier or call a pest control service. Search for and remove dead rodents during treatment, as well as other infestation signs. Search for and remove dead rodents in accordance with local requirements. Because of their enlarged mode of action, anticoagulant rodenticides take from 10 to 10 days to be effective after consumption of the bait. Rodents can be disease carriers. Do not touch dead rodents with bare hands, use gloves or use tools such as long-handled tweezers. This product contains a blurring agent and a dye. In the UK and Ireland, poisoned rodents should be double-bagged using plastic bags and either disposed of in a household waste bin with a secure lid to prevent access of wildlife or pets or collected by a specialist waste contractor or the local authority.

**SAPPHIRE GRAIN 25 - Brodifacoum**  
 CAS 58023-14-9, H-002076  
 Warning:  
 May cause damage to organs (blood) through prolonged or repeated exposure.  
 May not be safe for children.  
 Read label before use.  
 Keep children away from food, drink and animal feeding stuffs.  
 Avoid breathing dust.  
 Do not get on fire.  
 Do not eat, drink or smoke when using this product.  
 P-SIGNALLED: Immediately call 112/905 (EU/EEA) or dunder/brand name.  
 Get medical advice/attention if you feel unwell.  
 Store locked up in a closed container.  
 Dispose of contents/container in accordance with applicable regulations.

Instructions for safe disposal of the product and its packaging:  
 At the end of the treatment, dispose unopened bait and the packaging in accordance with local requirements. UK only: In the UK waste bin should be double-bagged in plastic bags and disposed of in a household waste bin with a secure lid to prevent access of wildlife or pets or taken to a civic amenity site. For information on civic amenity sites contact the local authority. Ireland only: At the end of the treatment, dispose of unopened bait and the packaging in accordance with EPA requirements for the disposal of hazardous waste. Use of gloves is recommended. Where control of rodents has not been achieved by a control program after 35 days, the user should seek advice from the product supplier or call a pest control service. Do not use this product for prevention or public health. Poisoned rodents should be double-bagged using plastic bags and either disposed of in a household waste bin with a secure lid to prevent access of wildlife or pets or collected by a specialist waste contractor.

Particulars of likely direct or indirect effects, first aid instructions and emergency measures to protect the environment:  
 This product contains an anticoagulant substance. If ingested, symptoms, which may be delayed, may include nosebleed and bleeding gums. In severe cases, there may be bruising and blood present in the faeces or urine. Antidote: Vitamin K1, administered by a medical/veterinary professional only. In case of: Dermal exposure, wash skin with water and then with water and soap. Eye exposure: Close eyes with eye-cloths soaked in water. Keep eyes lid open at least 10 minutes. Oral exposure: Rinse mouth carefully with water. Never give anything by mouth to unconscious person. Do not provoke vomiting. If swallowed, seek medical advice immediately and show the product's container or label. UK only: UK medical professionals should contact the National Poisons Information Service (www.npis.org) for further advice. Contact a veterinary surgeon in case of ingestion by a pet. Bait stations must be labelled with the following information: "do not move or open", "contains a rodenticide", "product name or authorisation number", "active substance(s)" and "in case of accident, call a poison centre. Hazardous to wildlife".

Conditions of storage and shelf life of the product under normal conditions of storage:  
 Store in a dry, cool and well-ventilated place. Keep the container closed and away from direct sunlight. Store in places prevented from the access of children, birds, pets and farm animals. Shelf life: 2 years.

Special labelling provisions for treated:  
 Use baited safely and sustainably. It is illegal to use this product for uses or in a manner other than prescribed on this label. For information or to report a poisoning incident contact: The National Poisons Information Centre, Beaumont Hospital, Dublin (01-859-2166), within the label for reference.
