

## ELECTRONIC RAT KILLER

### User Manual

Model: RAC-1104

### Features & Functions:

- 1) Delivers high voltage electronic shock to instantly kill rats.
- 2) Simply bait, place and dispose of dead rodents.
- 3) One way trap containment door.
- 4) Detachable power unit for safe, easy cleaning.
- 5) Recharge via USB cable or operate via USB mains power (cables included).
- 6) Kills up to 20 rats on one full charge.
- 7) Safe, clean and discreet non-touch disposal.
- 8) Advanced microchip technology for advanced power consumption.
- 9) UKCA certification.
- 10) Always read the instructions before use.

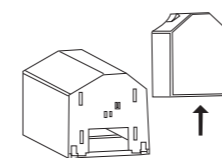

### Application:

The RACAN Electronic Rat Killer can be used in a wide variety of settings, including dining-rooms, kitchens, bedrooms, offices and in places that rats usually appear.

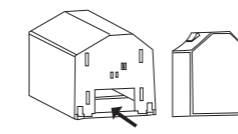

### Technical Specifications:

Power supply:	1x3.7V 18650 Lithium-Ion Battery (USB cable included)
Low battery indicator:	2.85V
Static work current:	≤0.33mA
High voltage working current:	≤950mA
Charging Current:	400mA
High voltage:	6000-9000V
High voltage produced time:	4 minutes.
One full charge can provide 20 shocks.	

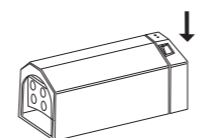

### Directions for use:

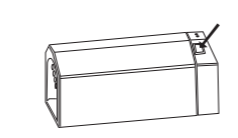

1. Pull out power unit from device chamber

2. Bait with something sweet like chocolate or peanut butter to attract rats to the trap

3. Connect power unit back to chamber

4. Press the switch to "ON" position

### Note Items for Use:

- 1) Charge the battery by connecting the USB cable (included) to 5V power supply, like a computer or USB charging device. Blue LED light will turn on when charging and will turn off when fully charged.
- 2) Adapter: Use an adapter that has an output of 5V 1A.
- 3) The rodent triggers metal plates when it enters the unit, and the unit emits high voltage shock immediately. The red light will turn on for 4 minutes. The high voltage produced time is 4 minutes. First, it delivers a high voltage shock which lasts for 1 minute. Then an electric shock which imitates rats heartbeat at 15HZ for each time and it continues doing this for 3 minutes. Then the high voltage shock stops, the light turns from red to green and flashes once every 5 seconds. At this point, a high voltage shock will not be produced until resetting the unit.
- 4) Every after killing the rat, press switch to "OFF" position (O) and remove power unit to clean the chamber. After cleaning, make sure the chamber is dry and then it can be reinstalled to use. (Use a cleaning agent to clean out the chamber to remove any odours that the rat may have left).
- 5) In the high-voltage chamber, there are two metal plates, when a rat enters, it will conduct the charged electricity from one plate to the other and will be killed instantly. To prevent incidental shock, please avoid contact with metal plates.

- 5) If the red and green lights flash in a chain once every 2 seconds after power on or killing of rat, this indicates that the battery should be recharged to maintain the efficiency of the rat killing function. Turn off the power before charging the battery.
- 6) Please make sure to charge the battery in full before the unit is used for extended periods of time.

### Warnings:

- 1) Inappropriate use of this product may cause electrical shock, or serious injury.
- 2) Never use this product around small children, small household pets, life support devices, and combustible materials.
- 3) Never use this device on wet surface to avoid high voltage electric leakage.
- 4) Avoid using the product in areas with excessive amounts of dust and debris as this can shorten the life of the product.
- 5) Always read the instruction manual before use.
